## Transportation

## RAIL TRANSPORTATION (Series Q 1-152)

Q 1-11. Railroad and other domestic intercity freight traffic, by type of transportation, 1939-1957.
Source: 1939-1954, Interstate Commerce Commission, Intercity Ton-Miles, 1989-1954, Statement No. 568 (mimeographed), 1956; 1955-1957, ICC, Annual Report, various issues.

For description of estimates, see Statement No. 568.
Q 12-14. Indexes of transportation output, 1889-1953.
Source: 1889-1946, Harold Barger, The Transportation Industries, 1889 to 1946, National Bureau of Economic Research, New York, 1951; 1947-1953, National Bureau of Economic Research, unpublished estimates by John W. Kendrick.

Sources of figures and methods of computation are described in Barger's book. The components of series $Q 13$, passenger traffic, are airlines, intercity buslines, waterways, and steam railroads. For series $Q$ 14, freight traffic, the components are motor trucking, pipelines, waterways, and steam railroads.

Q 15-31. Railroad mileage, equipment, and passenger and freight service, 1830-1890.
Source: Interstate Commerce Commission, Railway Statistics Before 1890, Statement No. 32151 (mimeographed), 1932.

Before 1890, the principal source of continuous information on railroads is the annual Poor's Manual of Railroads. The figures in the Manual were revised in successive issues. The Interstate Commerce Commission consulted the issues from 1869 to 1900 and evidently took account of the revisions. Earnings and traffic figures are understatements of actual level; mileage covered is shown in the table below. Similar but not identical figures, with the degree of coverage similarly indicated in terms of mileage, appear in Bureau of the Census, Report on Transportation Business in the United States at the Eleventh Census, 1890, part I.

Table I. Miles of Road Operated by Railroads

| Year | Roads reporting earning: ${ }^{1}$ | Roads reporting carninge and traffic atatistics | Year | Roads reporting earnings ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: |
| 1890. | 158,087 | 167,976 | 1879. | 79,009 |
| 1889 | 153,945 | 168,689 | 1878. | 78,960 |
| 1888 | 145,887 | 145,841 | 1877. | 74,112 |
| 1887 | 187,028 | 186,986 | 1876. | 73,508 |
| 1886. | 125,185 | 125,146 | 1875 | 71759 |
| 1885. | 128,820 | 122,110 | 1874 | 69,278 |
| 1884 | 115,704 | 118,172 | 1878 | 66,287 |
| 1888, | 110,414 | 106,988 | 1872 | 57,828 |
| 1888. | 104,971 | 95,752 | 1871 | 44,614 |
| 1880-. | 82,146 |  | 1851 | 8,886 |

${ }^{1}$ Includes elovated railwayn.
All figures except those for series Q 15 and Q 17 are based on reports of individual railroads for. fiscal years ending in the calendar year indicated. The period of time covered is therefore not the same for all carriers included. Balance sheet and equipment data pertain to the ends of such fiscal years.

Data for 1890 shown in these series do not agree with 1890 data shown for series Q 44-72 because of different sources.

Q 32. Freight service, ton-miles carried, 13 railroads, 1865 1885.

Source: H. V. and H. W. Poor, Manual of Railroads, New York City, 1888, p. XXVIII.
The roads represented are 7 eastern roads (Pennsylvania; Pittsburgh, Fort Wayne, and Chicago; New York Central; Lake Shore; Michigan Central; Boston and Albany; New York, Lake Erie and Western) and 6 western roads (Illinois Central; Chicago and Alton; Chicago and Rock Island; Chicago; Burlington and Quincy; Chicago and Northwestern; Chicago, Milwaukee, and St. Paul).

Q 33-42. Railroad property investment, capital, income, and expenses, 1850-1890.
Source: See source for series Q 15-31.
See also text for same series.
Q 43. Miles of railroad built, 1830-1925.
Source: 1830-1879, Tenth Census Reports, vol. IV, Report on the Agencies of Transportation in the United States, p. 289; 1893-1925, Railway Age, vol. 104, No. 1, Simmons-Boardman Publishing Corp., New York, January 1, 1938, p. 66.

For a more detailed discussion of the problems of estimating miles of railroad built, see E. R. Wicker, "United States Railway Investment in the Pre-Civil War Period," and George R. Taylor, "Comments on E. R. Wicker's Paper," in Studies in Income and Wealth, Princeton University Press, vol. 24 (forthcoming).
The Tenth Census report (pp. 289-293, 300-375) contains materials on history of construction which includes figures on mileage built and existent, by groups of States, for individual companies, annually from 1830 to 1880. Somewhat similar data appear in Bureau of the Census, Report on Transportation Business in the United States at the Eleventh Census: 1890, part 1, pp. 3-5, 54-107.

According to the Bureau of the Census, information was received from every railroad known to exist in 1880. The letter of instructions from the Superintendent of the Census to the railroads said: "In cases . . . in which the records have been lost, the officers of such companies and roads are requested to obtain . . . this information in the best form possible. The recollection of officers and employees long in the service of a road may be used . . . if more reliable data be not accessible."

The Railway Age obtained its figures at annual intervals from individual railroads and from State railroad commissions.

It is not clear just when a mile of road would be reported as built. Construction of some lines extended over several years. Each annual segment may have been reported when finished, or nothing may have been reported until the whole line was completed. The year of physical completion may have differed from the year in which traffic was first carried. In such cases, the mileage may have been assigned to either year.

The Census Bureau figures pertain only to miles in operation in the census year. The figures for any year are, therefore, understatements to the extent that mileage constructed in that year may have been abandoned by June 1, 1880 (the date of the 1880 Census).

The change from year to year in miles operated (series $Q 15$ ) or miles owned (series $Q 16$ ) is sometimes used as a measure of miles constructed. The annual change in miles operated, however, is also affected by acquisitions of trackage rights, as a result of which the same line may be counted in the operation of two or more railroads. Both the change in miles operated and that in miles owned are affected by abandonments during the year (regardless of when constructed).

## Q 44-152. General note.

The principal sources of these series are various issues of two annual publications of the Interstate Commerce Commission: For 1954-1957, Transport Statistics of the United States, part 1; and for all years prior to 1954, Statistics of Railways in the United States.

No attempt has been made to adjust the figures for the effect of changes in methods of accounting and reporting; hence, the data for the various years are often only approximately comparable.

Although railroads regulated by the ICC are still described legally as "steam railways," most train and switching operations are now performed by Diesel locomotives, and some divisions of the railways included are electrified. The Commission has also regulated a small and diminishing number of railways of the interurban electric type which are not included in the figures shown here.
Railway operating companies are those whose officers direct the actual transportation service and whose books contain operating as well as financial accounts. Lessor companies maintain a separate legal existence, but their properties are operated by the lessees. Proprietary companies are also nonoperating companies. Their outstanding capitalization is owned by other railway companies. The term "circular" refers to roads (operating or nonoperating) for which brief circulars showing date of incorporation, mileage, and a few of the facts were filed with the Interstate Commerce Commission. They include intrastate roads and roads under construction. The term "unofficial" is used to indicate roads for which official returns were not received by the ICC-the figures having been taken from the returns by roads in prior years, and items contained in railway and engineering periodicals and newspapers, corrected in accordance with the best information available.
Switching and terminal companies are those operating separately for joint account or for revenue. Services such as those of switching and terminal companies are mostly performed directly by the line-haul carriers as an ordinary part of their business. Line haul denotes train movements between terminals and stations on main and branch lines of the road, exclusive of switching.
Beginning in 1911, the ICC classified operating companies on the basis of operating revenues. Those of Class I had annual revenues above $\$ 1,000,000$; Class II, above $\$ 100,000$; Class III, below $\$ 100,000$. Beginning in 1956, the minimum for Class I was raised to $\$ 3,000,000$ and the other two classes were consolidated. If the revenues of a company fall below the limit, it is not reclassified until the decline appears to be permanent. The relative importance of Class I railroads has increased since 1911 because of the growth of traffic and the absorption of small roads in larger systems. The ratio of operating revenues of Class I line-haul companies to the total revenues of Classes I, II, and III was 96.48 percent in 1911, 97.45 percent in 1916, 98.07 percent in 1926, 98.76 percent in 1941, and 99.06 percent in 1945.
A collection of definitions of words or phrases frequently used in discussions of railway statistics has been issued by the

ICC, entitled Railway Statistical Terms, Statement No. 4119, June 1941. For financial terms, see ICC, Uniform Systom of Accounts for Steam Railroads.

Statistics of mileage in existence and stocks of equipment, and balance sheet items, pertain to the end of the year indicated.
Q 44-72. Railroad mileage, equipment, and passenger traflic and revenue, 1890-1957.
Source: All series, except series Q 53-54, see general note for series Q 44-152. Series Q 53-54, American Railway Car Institute, Railroad Car Facts, New York, annual issues.

Q 45, mileage constructed. Miles on which operations were begun during the year. Figures exclude relocated road or road constructed to shorten distance without serving new territory.

Q 46, mileage abandoned. Miles on which operation was permanently abandoned during the year, the cost of which was written out of the investment accounts or was scheduled to be written out at the end of the year.

Q 49, track operated, first main track. Equivalent to miles of road operated. Figures exceed those for series Q 47, road owned, in some years because of two or more roads operating on same line under trackage agreements.

Q 60, average tractive effort. Figures represent the force in pounds exerted by locomotives, measured at the rim of the driving wheels.

Q 61-63, passenger-train cars. Includes coaches and parlor, sleeping, dining, club, lounge, observation, postal, baggage, express, and other cars, as well as cars serving a combination of purposes.

Q 64, freight-train cars. Includes cabooses as well as freight-carrying cars.

Q 71, passenger revenue. Excludes revenue from services such as handling of excess baggage or mail; sleeping and parlor or chair car reservations; dining and buffet service on trains; station, train, and boat privileges; parcel rooms; storage of baggage; or other miscellaneous services and facilities connected with the transportation of passengers. Passenger revenue depends upon the established tariffs (the published schedules of rates and fares) and includes extra fares on limited trains, additional railway fares for the exclusive use of space, mileage and scrip coupons honored, or revenue from the transportation of corpses.

Q 72, revenue per passenger mile. Represents figures for series $Q 71$ divided by those for series $Q 67$.
Q 73-86. Railroad freight traffic and revenue, 1890-1957.
Source: See general note for series Q 44-152.
Revenue-tons and ton-miles exclude the movement of a railroad company's materials and supplies on its own lines. A carload is a shipment of 10,000 pounds or more of one commodity from one shipper to one consignee.

Tons originated are tons identified as not having had previous line-haul transportation by other rail carriers; such shipments include import traffic and traffic from outlying possessions of the United States received from water carriers at the port of entry, and finished products from transit points. Tonmiles are computed by multiplying the weight of each shipment by the distance it moves and summing the products.

For definitions of Class I, II, and III roads, see general note for series Q 44-152.

Q 75, products of agriculture. Includes not only raw farm products but simple manufactures such as flour, corn meal, cottonseed meal, cake, and linters. On the other hand, such products as vegetable oils, sugar and molasses, canned fruits
and vegetables, and manufactured tobacco are included in series Q 79, manufactures and miscellaneous.

Q 77, products of mines. Includes coke as well as coal and other raw minerals.

Q 78, products of forests. Includes not only raw forest products but lumber, shingles, lath; box, crate and cooperage materials; veneer and built-up wood.

Q 84, freight revenue. Includes revenue from the transportation of freight and from transit, stop, diversion, and reconsignment arrangements upon the basis of tariffs. Excludes revenue from such activities as switching of freight-train cars; water transfers of freight, vehicles, and livestock; movement of freight trains at a rate per train-mile or for a lump sum; storage of freight; demurrage; grain elevators; stockyards; or other miscellaneous services and facilities connected with the transportation of freight.
Q 87-88. Railroad passenger-miles per car-mile and per trainmile, 1890-1957.
Source: Interstate Commerce Commission, Revenue Traffic Statistics, December issues.
Figures for passenger-miles per car-mile for 1908-1919, and for passenger-miles per train-mile for 1890-1932, were computed by the National Bureau of Economic Research from figures for passenger-miles, car-miles, and train-miles presented in Statistics of Railways in the United States.
Q 89. Passenger train-miles per train-hour, 1936-1957.
Source: Interstate Commerce Commission, Passenger Train Performance, December issues.

The train-hour figures upon which these figures are based are reckoned from the time a train leaves its original terminal to the time it arrives at its final terminal. Time spent in stopping to take on and discharge traffic and other delays on the road is included.
Q 90-92. Railroad freight revenue ton-miles per loaded carmile, train-mile, and mile of road, 1890-1957.
Source: See general note for series Q 44-152.
Q 93. Freight train-miles per train-hour, 1920-1957.
Source: Interstate Commerce Commission, Freight Train Performance, December issues.
For explanation of train-hour figures, see text for series Q 89.
Q 94. Freight car-miles per car-day, 1921-1957.
Source: See general note for series Q 44-152.
Days of unserviceable cars are included in the divisor.
Q 95-102. Railroad property investment and capital, 1890-1957.
Source: See general note for series Q 44-152.
Q 95, investment, book value. Figures represent recorded value, in the accounts of carriers, of land, fixed improvements such as roadbed and track, rolling stock, maintenance machinery, etc., owned by them. Figures include property held under contract for purchase.

Q 96, depreciation reserve. Figures represent the accumulated accounting allowance for loss in service value not restored by current maintenance. The loss in value is incurred in connection with the consumption or prospective retirement of physical property in the course of service from causes against which carriers are not protected by insurance, which are known to be in current operation, and the effect of which can be forecast with a reasonable approach to accuracy.

Q 100, funded debt unmatured. Funded debt is debt maturing more than one year from date of issue.

Q 101, net capitalization. Figures represent railway capital outstanding, series $Q 97$, minus stocks and debt of railroad companies held by other railroad companies.
Q 103-105. Railroad capital expenditures for additions and betterments, 1921-1957.
Source: Association of American Railroads, Bureau of Railway Economics, Railroad Transportation, annual issues.

Additions comprise: Additional facilities such as equipment (rolling stock), tracks, buildings and other structures; additions to such facilities, such as extensions to tracks, buildings and other structures; additional ties laid in existing tracks; and additional devices applied to facilities such as airbrakes applied to cars not previously thus equipped.

Betterments comprise improvements of existing facilities through the substitution of superior parts for inferior parts retired, such as the substitution of steel-tired wheels for cast wheels under equipment, the application of heavier rail in tracks, the strengthening of bridges by the substitution of heavier members, and the application of superior floors or roofs in buildings.

Q 105-116. Railroad income and expenses, and interest and dividends, 1890-1957.
Source: See general note for series Q 44-152.
Q 106, operating revenue. Includes revenue from freight, passenger, and other transportation and incidental services.

Q 107-109, operating expenses. Includes current depreciation.

Q 110, tax accruals. Taxes imposed by any form of government whether based on an assessed value of the property, on amounts of stocks and bonds, on earnings, income, dividends declared, payroll, number of passengers, quantity of freight, length of road, rolling stock, or other basis. Tax accruals do not include special assessments for street and other improvements, nor special benefit taxes such as water assessments.
Q 111, operating income. Figures represent net revenue from railway operations (series Q 106 minus series $Q$ 107) less tax accruals (series $Q 110$ ).
Q 112, net operating income. Figures represent operating income (series $Q$ 111) minus net payable balance of equipment and joint facility rents. The equipment rents deducted at this point are those for equipment leased for less than one year, or interchanged. They are usually on a per day or per mile basis.
Q 113, net income. Figures represent net operating income (series $Q 112$ ) plus other income, minus miscellaneous deductions and fixed and contingent charges. Fixed charges are mainly rent for leased roads and equipment (i.e., equipment leased for one year or more), and interest (except contingent interest).

Q 116, interest accrued on funded debt. Figures include interest not paid during year on debt in default of interest; exclude interest on debt owned by issuing company, or on debt incurred for new lines, extensions, additions or betterments, accrued before such property is completed or comes into service.
Q 117-123. Railroad tax accruals, 1921-1957.
Source: See general note for series Q 44-152.
Other taxes (series $Q$ 123) are largely property taxes levied by State or local governments.

Q 124. Miles of railroad operated by receivers or trustees, 1894-1957.
Source: See general note for series Q 44-152.

Q 125-127. Railroad highway grade crossings, 1925-1957.
Source: See general note for series Q 44-152.
Specially protected highway grade crossings (series $Q$ 126) include crossings with operated gates, watchmen, or both, during at least part of day, and those with audible signals, visible signals, or both; exclude those with fixed signs only.
Q 128-137. Fuel received, ties and rails laid, and purchases by railroads, 1917-1957.
Source: Series $Q$ 128-134, see general note for series $Q$ 44-152. Series Q 135-137, Association of American Railroads, Railroad Transportation, annual issues.

Q 128-130, fuel received. Figures include not only fuel for operation of trains but fuel for station, shop, or other use.

Q 131, new rails laid. Figures include both rails laid in replacement and rails laid in additional tracks, new lines, and extensions.

Q 132-133, cross-ties laid. Figures for 1917-1926 include only ties laid in replacement. In 1927, $78,340,000$ ties were laid in replacement only. Treated ties are those which have been subjected to some preservative process, e.g., creosoting, before being placed in the track.

Q 138-140. Pullman Company operations, 1915-1957.
Source: Interstate Commerce Commission, Statistics of Railways in the United States and Transport Statistics in the United States, part 2, The Pullman Company (Sleeping Car Companies), various annual issues; except series $Q 139,1915-$ 1921, Office of Business Economics, Survey of Current Business, January 1939, p. 18.

Figures for series Q 139 exceed those in series $Q$ 70, parlor and sleeping car passenger-miles, mainly because travel of
railroad employees, etc. (for which railroad companies receive no revenue) is not included in series $Q$ 70; but if Pullman accommodations are paid for, the travel is included in series Q 139.

The number of Pullman employees (series Q 140) is the number on the payroll at the end of the year.

Q 141-142. Railroad employees and compensation, 1890-1957. Source: See general note for series $Q$ 44-152.
An employee is defined as a person in the service of a railroad, subject to its continuing authority to supervise and direct the manner of rendition of his service. Persons such as lawyers engaged to render only specifically defined service for specific cases and not under general or continuing retainer are not classed as employees. For 1890-1914, the number of employees is the number on the payroll at the end of the year. Thereafter, the nature of the figures included for the smaller (Class II and III) roads is not clear in the source. For Class I roads they appear to be averages of 4 quarterly counts, 1915-1920, and of 2 quarterly and 6 months counts, 1921; beginning 1922, they are averages of 12 monthly counts.

Q 143-152. Railroad accidents and fatalities, 1891-1957.
Source: Interstate Commerce Commission, Accident Bulletin, annual issues.

The Accident Reports Act approved May 1910 requires the filing of monthly reports of railway accidents and authorizes the Interstate Commerce Commission to investigate accidents. A reportable accident is one arising from the operation of a railway resulting .... in the death of a person; or in the disability of an employee for more than 3 days during the 10 days following the accident; or in the disability of others for more than 1 day

Series Q 1-11. Railroad and Other Domestic Intercity Freight Traffic, by Type of Transportation: 1939 to 1957 [In millions of tom-milea. A ton-mile ls the movement of 1 ton ( 2,000 pounds) of freight traffic for the distance of 1 mile. Comprices public and private trafic]

[^1]${ }^{7}$ For 1915-1922, identified as "other than steam," but all or almost all of the locomotives must be electric.
s For 1916-1956, represents steam locomotives and freight cars of Class I railroads
excluding switching and terminal companies; for 1957, includes all Class I locomotives excluding switching and terminal companies;
including switching and terminal companies.
ncluding switching and terminal companies.
9 Diesel included with "Other."
${ }^{10}$ Calendar-year data.

Series Q 44-72. Railroad Mileage, Equipment, and Passenger Traffic and Revenue: 1890 to 1957-Con.

- Clase I line-haul railroads.
- For 1916-1956, reprecents steam locomotives and freight cars of Clase I railroads excluding owitching and terminal companies; for 1957, includes all Clase I locomotivea including owitching and terminal companies.

Series Q 73-86. Railroad Freight Traffic and Revenue: 1890 to 1957

1 Includes forwarder traffic beginning 1939.
${ }^{2}$ United States as a aystem, i.e., ton-miles or revenue of connecting roads is included in the numerator, but only tonnage originated in the denominator.

Series Q 87-94. Railroad Passenger and Freight Operations: 1890 to 1957
[Tons are of 2,000 pounds. Class I, II, and III railroads except as follows: Series Q 87, Clases I beginning 1911; series Q 88, Class I beginning 1988; and series Q 89, Q 93, Q 94,

${ }^{1}$ This average is obtained by dividing the revenue ton-miles by the total loaded car-miles, the latter item including some cars loaded with nonrevenue freight. This method is neceseary to preserve comparability with figures for the earlier years, and the figures differ alightly from the average "net tons per loaded car" shown in the
reguiar monthly statementa of Freight and Faseenger Service Operating Statistica based on revenue and nonrevenue ton-miles and car-miles. Class I and II railroads.

Series Q 95-105. Railroad Property Investment, Capital, and Capital Expenditures: 1890 to 1957
Includes intercorporate duplications. Figures subject to general exception that prior to 1908, the returns for awitching and terminal companies were included where applicable Capital expenditure represents total money outlay without deductions for property retired

## WATER TRANSPORTATION (Series Q 153-245)

## Q 153-245. General note.

Basic governmental sources of historical merchant-marine and water-traffic statistics include American State Papers: Class IV, Commerce and Navigation, vols. 1 and 2, for 17891823; the various annual issues of Foreign Commerce and Navigation of the United States, for 1821-1946, originally issued by the Register of the Treasury and then by the Treasury Department, later by the Department of Commerce and Labor, and finally by the Department of Commerce; the Annual Report of the Commissioner of Navigation, 1884-1923, the issuance of which followed a similar succession beginning with the Treasury Department; annual issues of Merchant Marine Statistics, 1924-1957, originally prepared by the Department of Commerce as successor to the statistical section of the Annual Report of the Commissioner of Navigation, and now issued annually by the Bureau of Customs; and the various annual issues of the Annual Report of the Office of the Chief of Engineers, Corps of Engineers. The Statistical Abstract of the United States, a secondary source, also contains historical merchant-marine and water-traffic statistics. The Statistical Abstract has been issued by the following agencies: 1878-1902, Bureau of Statistics (Treasury Department) ; 1903-1911, Bureau of Statistics (Department of Commerce and Labor); 1912, Bureau of Foreign and Domestic Commerce (Department of Commerce and Labor) ; 1913-1937, Bureau of Foreign and Domestic Commerce (Department of Commerce); 1938-1957, Bureau of the Census (Department of Commerce).

Congressional documents also contain historical series on the merchant marine, foreign commerce, and related fields. For 1789-1882, a particularly valuable collection of documents was found in the library of the Department of Commerce, bound together under the title Decadence of American Shipping and Compulsory Pilotage. The documents included are as follows: Foreign Commerce and Decadence of American Shipping, H. R. Ex. Doc. No. 111, 41st Congress, 2d session; Causes of the Reduction of American Tonnage and the Decline of Navigation Interest . . ., H. R. Report No. 28, 41st Congress, 2d session; Foreign Commerce and the Practical Workings of Maritime Reciprocity, H. R. Ex. Doc. No. 76, 41st Congress, 3d session; Causes of the Decadence of Our Merchant Marine; Means for Its Restoration and the Extension of Our Foreign Commerce, H. R. Report No. 342, 46th Congress, 3d session; American Shipping, H. R. Report No. 1827, 47th Congress, 2d session; American Merchant Marine, H. R. Report No. 363, 48th Congress, 1st session; Ship-Building and Ship-Owning Interests, H. R. Report No. 750, 48th Congress, 1st session; and reports of lesser interest, H. R. Misc. Doc. No. 37 and Report No. 1848, both of the 48th Congress, 1st session.
Since 1921, publications of the Maritime Commission and its predecessor agencies also should be consulted, particularly the reports entitled, Ocean-Going Merchant Fleets of Principal Maritime Nations, Iron and Steel, Steam and Motor, Vessels of 2,000 Gross Tons and Over, issued quarterly or semiannually, 1921-1941, and Employment of American Flag Steam and Motor Merchant Vessels of 1,000 Gross Tons and Over, issued quarterly, 1923-1941. Finally, the Bureau of the Census (and its predecessor Census Office) has published the results of five censuses of water tranportation, as follows: 1880, 1889, 1906, 1916, and 1926 (see general note for series Q 153-190, below).

## Q 153-190. General note.

Statistics on documented merchant vessels and shipbuilding are from Merchant Marine Statistics, various annual issues, supplemented by records of the Bureau of Customs. Many are from the 1936 issue. Some of the estimates from the 1936 report have been modified, however, as explained below in table II. The text statements, and the correction of errors found in the published tables are based on reference to the primary sources, as follows: For 1789-1823, see American State Papers: Class IV, Commerce and Navigation, vols. 1 and 2 (published in 1834); for 1821-1892, see annual issues of Commerce and Navigation of the United States; for 1884-1923, see issues of Annual Report of the Commissioner of Navigation; for 1924-1945, see annual issues of Merchant Marine Statistics.

Of the Maritime Commission reports cited in the general note for series Q 153-245, above, the first, Ocean-Going Merchant Fleets . . ., provides data for each leading maritime nation on ocean-going merchant vessels of 2,000 gross tons and over, showing number and tonnage of such fleets classified by age, speed, size, boilers, engines, draft, etc., by major vessel type. The second, Employment of American Flag Steam and Motor Merchant Vessels . . ., shows for seagoing merchant vessels of 1,000 gross tons and over the number and tonnage of such vessels employed in U.S. foreign and domestic trade, arranged by major vessel type, ownership (government and private), and area of operation.

Census statistics on water transportation are not presented here. For reports of these censuses, see Tenth Census Reports, vol. IV, Report on Agencies of Transportation, 1880; Eleventh Census Reports, Report on Transportation Business, part 1, "Transportation by Water"; Transportation by Water, 1906; Water Transportation, 1916; and Water Transportation, 1926.

The first census, for 1880 , was limited to steam vessels. The report of this census includes a detailed history of steam navigation in the United States with separate discussion and single-year construction statistics by geographic region, from the beginning to 1880. (See T. C. Purdy, "Report on Steam Navigation in the United States," Tenth Census Reports, 1880, vol. IV.) The report of the shipbuilding census, also taken the same year, includes a detailed technical history of shipbuilding in all aspects, with particular reference to sailing craft. Single-year figures are shown for New England shipbuilding, 1674-1714, classified by type of vessel and place where built. (See Henry Hall, "Report on the Ship-Building Industry of the United States," Tenth Census Reports, 1880, vol. VIII.)

The Censuses of 1889 and 1906 included all classes of vessels. However, the 1889 Census included fishing vessels for the Pacific Division only and the 1906 Census excluded fishing vessels. The Censuses of 1916 and 1926 provided data for all U.S., documented and undocumented, vessels and craft of 5 tons net register and quer, whether propelled by machinery or sails, or unrigged, except that certain specified types of vessels were excluded. (See Bureau of the Census, Water Transportation, 1926, p. 5.) While the Census reports of 1850 and 1860 contain some statistics relating to water transportation, these statistics apparently were collected by other agencies.

Data shown here are for documented merchant vessels only, exclusive of yachts. The following definitions are those currently applicable:

Documented vessels include all vessels granted registers, enrollments and licenses, or licenses, as "vessels of the United States," and as such have certain benefits and privileges. Vessels of 5 net tons and over owned by citizens of the United States and otherwise complying with the requirements for documentation may be documented to engage in the foreign or coasting trades or the fisheries.

Registers are ordinarily issued to vessels engaged in the foreign trade or the whale fisheries. Historically, this group has included the major portion of the whaling fleet.
Enrollments and licenses are issued to vessels of 20 net tons and over engaged in the coasting trade or fisheries.
Licenses may be issued to vessels of less than 20 net tons engaged in the coasting trade or fisheries.

Undocumented craft are those not registered, enrolled, or licensed. Barges, scows, lighters, and canal boats, without any propelling power of their own, operated exclusively in a harbor, on the canals or other internal waters of a State, or on the rivers or lakes of the United States, not in any case carrying passengers, and vessels under 5 net tons are exempt from the requirements of the laws governing documentation.
Gross tonnage refers to space measurement, 100 cubic feet equalling 1 ton; it is not a measure of weight. Gross tonnage is the capacity of the entire space within the frames and the ceiling of the hull, together with those closed-in spaces above deck available for cargo, stores, passengers, or crew, with certain minor exemptions. Before 1865, 95 cubic feet equalled 1 ton, and the admeasurement method differed in other respects.
Changes in maritime law: Admeasurement method. "Admeasurement" refers to the method of calculating gross tonnage of ships or vessels. The first law of the United States on the subject appears to have been enacted September 1, 1789 (1 Stat. 55). The enactment then made was reenacted with certain minor amendments in the Acts of August 4, 1790 (1 Stat. 169), and of March 2, 1799 (1 Stat. 675), and as so enacted was in force until January 1, 1865.

A basic change in admeasurement method was provided in the act of May 6, 1864, effective January 1, 1865 (13 Stat. 70-72, R. S. 4153, 46 U. S. C. 77). The method described in the act of May 6, 1864, appears to have been substantially the same as that in force in 1945.
For the transition period, 1865-1868, the total tonnage figures for the fleet are "mixed." During those years, the total fleet tonnage was obtained by combining the "old admeasurement" tonnage of vessels not yet readmeasured and the "new admeasurement" tonnage of vessels which had been readmeasured or newly built. For a recapitulation of the "old" and "new" components of the fleet tonnage (not the same vessels) for each year, 1865-1868, see Commerce and Navigation, 1870, p. 798.
No table has been located comparing the tonnage of a substantial number of vessels under "new" and "old" admeasurement; hence, neither the magnitude nor the direction of the change can be stated here. Apparently it varied for different types of vessels. "Brigs, schooners, and sloops measure less under the 'new' admeasurement . . . while ships, barks, steamboats, and vessels having closed-in spaces above their hulls have their tonnage largely increased." Further, the difference between "old" and "new" was not believed to affect a comparison of New England shipbuilding for the years 1855 and 1868. (See Treasury Annual Report, 1868, p. 496.)

Another type of change in maritime law affecting the statistics is illustrated by the act of April 18, 1874 ( 18 Stat. 31), which exempted the greater amount of canalboat and other unrigged tonnage from documentation. (See U.S. Code, title 46, sec. 336.) For 1874-1876, the "balance sheets of tonnage," published annually in the source volumes, record the removal of 879,000 tons of vessels for this reason alone. However, Merchant Marine Statistics, 19s6, lists 843,000 tons exempted in 1876, whereas the 1876 balance sheet of tonnage specified 601,000 tons exempted. The reason for this discrepancy is not clear. The tonnage exempted annually, 1874-1936, is shown on pp. 54-55 of Merchant Marine Statistics, 1956.

At irregular intervals, steps were taken to remove from the tonnage accounts those vessels lost, abandoned, captured, sold to aliens, etc., which had not been officially reported for removal purposes. From the outset, the failure to remove such vessels annually resulted in a cumulative error which inflated the statistics of tonnage. When general clearances of this cumulative error were made, the effect was concentrated in a single year or a small group of years.
For a basic statement on this subject, see American State Papers, cited above, vol. 1, p. 494, where Albert Gallatin, Secretary of the Treasury, outlines the problem and discusses the first attempt (1800) to deal with it. Recurrently, in the annual tonnage reports found in the source volumes, the problem is discussed, the announcement is made that the rolls have been finally cleared, and assurance is given that the problem has been solved for the future. However, as late as 1867, in spite of repeated clearances in earlier years, the "First Annual Report of the Director of the Bureau of Statistics" stated, "The tonnage returns were swelled with thousands of ghostly ships-ships that had gone to the bottom years ago." (See Annual Report of the Secretary of Treasury, 1867, p. 244.)

In 1869, the Register of the Treasury attributed the entire decline of tonnage reported for 1869 to this factor. (See Treasury Report, 1869, p. 300.) In the same year, Francis A. Walker, Deputy Special Commissioner of Revenue in Charge of the Bureau of Statistics, stated that the process of assigning a number to each vessel and the institution of an annual list of vessels, as required by the Act of July 28, 1866, "has succeeded in clearing from the lists of vessels . . . a vast amount of purely fictitious tonnage, which have been carried forward from year to year [although] thousands of vessels which this tonnage originally represented had been meanwhile lost at sea, broken up, or sold abroad." (See Treasury Report, 1869, p. 342.)

In the "balance sheets of tonnage" published annually in the source volumes, clearances of cumulative error are generally identified as "not heretofore credited" to distinguish them from listings of removals of the various types routinely reported as having occurred during the given year.

Some of the more important clearances of this cumulative error, and the tons of shipping thereby removed, were: 18001901, 197,000; 1811, amount not stated but the effect is evident in series Q $154 ; 1818,182,000 ; 1829-1830,604,000 ; 1837,96,000$; 1841-1842, 267,000; and 1855-1858, 945,000.
In later years, the terms "obsolete," "obsolete, not heretofore reported," and "correction of balance" found in annual balance sheets of tonnage, frequently reflect removal of cumulative errors. Examples are (in tons) : 1864, 188,000; 1866, $1,063,000$; 1867, 260,000; 1868, 128,000; 1869, 338,000; 1870, 58,000 ; 1871, 103,000; 1881, 157,000.

Other factors which require that early merchant-vessel statistics should be used with some caution are the following: (1) In some instances, systematic differences in identically described statistical series appear in the source volumes (see
text for series Q 178-182) which reflect conflicting series of figures, possibly originating from different primary sources of data (see table II below); (2) transcription and typographical errors have crept into historical tables in the source volumes in the process of repeated recopying and retypesetting; (3) statistically significant footnotes which appeared in early reports frequently were dropped in later years; and (4) caution is suggested in referring back to the earlier volumes in the search for explanations of discrepancies or major changes, since the earlier data may reflect the same or similar errors.

In this volume (see table II below), a number of the copying and typesetting errors have been corrected where the exact nature of the discrepancy could be determined beyond reasonable doubt; several broad differences in figures have been pointed out; and a few detailed tabular notes have been added based on information in various annual issues selected largely at random.
Table II. Merchant Marine Tonnage-Changes in Figures From Those Shown in Source

Q 153-168. Documented merchant vessels, by major classes, material of which built, and trade, 1789-1957.
Source: Bureau of Marine Inspection and Navigation, Merchant Marine Statistics, 19s6, and Bureau of Customs, records. (Series Q 163-164, 1884, Treasury Department, Annual Report of Commission of Navigation, 1884, p. 161.)

See also general notes for series $Q$ 153-245 and Q 153-190.
For 1789-1793, tonnage figures are the "duty tonnage," i.e., the tonnage of vessels on which duties were collected during the year. (See American State Papers, cited above in general note for series $Q$ 153-190, vol. 1, p. 895.) The "duty tonnage" appears to have been the tonnage on which duties were collected on registered vessels, including "the repeated voyages of the same vessel," plus tonnage of the enrolled and licensed vessels which paid tonnage duties once each year. (See American State Papers, cited above, vol. 1, pp. 494, 498, 528.) Beginning in 1794, "district tonnage returns" were used, derived from reports of District Collectors of Customs, which gave the tonnage of vessels in each district based on registers, enrollments, and licenses outstanding, as of December 31.

For 1794-1801, figures are district tonnage returns, with no attempt to correct for the cumulative error caused by failure to remove vessels lost, abandoned, sold to aliens, etc. (See American State Papers, vol. 1, pp. 494, 499.) The figures for 1800-1801 ignore the first clearing of tonnage accounts which took place during these years. (See American State Papers, vol. 1, pp. 494-499, 527-531.) The correction for the cumulative error for registered vessels only would reduce the 1800 total to 819,571 tons and the 1801 total to 903,235 tons. The sharp drop attributable to the clearing of tonnage accounts would thereby be shifted back to 1800 instead of appearing in 1802.

For 1802-1818, the figures in series $Q 154$ consist of the "corrected registered" tonnage plus the uncorrected enrolled or licensed tonnage (see 1813 tonnage report in American State Papers, cited above, vol. 1, p. 1017). The figures for 1811 and 1818 reflect two additional attempts to clear out the cumulative error of registered vessels improperly retained on the registers. (See American State Papers, vol. 1, pp. 876, 958, and vol. 2, p. 406.)

The figures shown below in table III are those which were derived by a method authorized by Secretary of the Treasury Gallatin. They were reported to Congress in the annual tonnage reports in American State Papers as being the "actual" or "more nearly correct" tonnage.

Table III. "Actual Tonnage" of Documented Vessels: 1800 to 1818
[In thomeands of erose toma]

| Year | Tons | Year | Tons |
| :---: | :---: | :---: | :---: |
| 1818. | 1,160 | 1808. | 1,173 |
| 1817. | 1,841 | 1807 | 1,208 |
| 1816. | 1,264 | 1806. | 1,166 |
| 1815 | 1,262 | 1805 | 1,085 |
| 1814 | 1,029 | 1804. | 988 |
| 1818 | 1,032 | 1808 | 917 |
| 1812 | 1,127 | 1802 | 865 |
| 1811 | 1,181 | 1801. | 850 |
| 1810. | 1,829 | 1800. | 768 |

These were obtained by taking the "corrected registered tonnage" and adding to it the "duty tonnage" for enrolled and licensed vessels. Since duties were paid only once each year on enrolled and licensed vessels, and owners were not likely to pay duties on nonexistent vessels, it was reasoned that the lower "duty tonnage" figure more accurately reflected the true total for the enrolled or licensed craft than did the district
returns of tonnage based on outstanding marine documents. This correction for enrolled and licensed craft was dropped after 1818, probably because, beginning 1819, the "duty tonnage" for this group exceeded the district tonnage returns for the group.

In American State Papers, vol. 1, p. 499, the tonnage described as "actual tonnage" in the comparative table for 1794 1799 is, in fact, the district returns of tonnage without correction of any kind. Elsewhere in the tonnage report for 1800 (pp. 494-499), and in tonnage reports for later years, the term "actual tonnage" normally means the district returns based on outstanding marine documents (registers, enrollments, and licenses) corrected for cumulative error. In table III, the term "actual tonnage" is used in the latter sense; the figures are from annual tonnage reports, $1800-1818$, in American State Papers, vols. 1 and 2.
Q 163-164, vessels, by material of which built. The source publication also classifies tonnage of each material by type of propulsion (steam, motor, sail, canalboat, and barge).

Q 165-168, vessels, by trade in which engaged. The source publication also presents the number of vessels engaged in each type of trade as well as tonnage. The statutes do not recognize for documenting purposes any fisheries except the cod, mackerel, and whale. Vessels engaged in catching any other fish, such as salmon or menhaden, are documented for the mackerel fishery.

Figures in early reports identified as "registered," or as "registered in foreign trade," commonly include the registered vessels engaged in the whale fishery. Accordingly, figures on "whale fishery" found in early reports should be examined carefully to determine whether they represent the entire whaling fleet or only the "enrolled or licensed" portion. The term "fisheries" as used in early volumes refers to cod, and later, to cod and mackerel fisheries. It rarely includes the whale fishery.

In terms of documentation as "registered," "enrolled," "licensed," series Q 165-168 are composed broadly as follows:

Series Q 165 (foreign trade) represents the total "registered" minus "registered whale fishery." The "registered" whaling tonnage, is, however, included for 1794-1798.

Series Q 166 (coastwise and internal) represents the portion of the enrolled or licensed group engaged in this trade. The rest of the enrolled or licensed group is in series Q 168 (cod and mackerel fisheries).

Series Q 167 (whale fishery) is the "registered whale fishery" portion of the registered fleet plus the "whale fishery" portion of the enrolled or licensed fleet. For 1794-1798, however, the registered whaling tonnage is not included here, but in series Q 165.

Series Q 168 (cod and mackerel fishery) is the cod and mackerel fishery portion of the enrolled or licensed fleet. The rest of the enrolled or licensed group is in series Q 166 (coastwise and internal).
Q 169-174. Documented merchant vessels, by geographic region, 1816-1957.
Source: See source for series Q 153-168.
See also general notes for series Q 153-245 and Q 153-190.
Q 175-177. Documented merchant vessels, by type of service, 1934-1957.
Source: See source for series Q 153-168.
Series Q 177 includes cable, cod, dredging, elevator, ferry, fireboat, fishing, ice breaker, lightering, oil exploitation, oystering, passenger, pile driving, pilot boat, police boat, patrol boat, refrigerator, towing, waterboat, whaling, welding, wrecking,
and miscellaneous. The source presents details for each of these in recent years.
See also general notes for series $Q$ 153-245 and Q 153-190.
Q 178-182. Merchant vessels built and documented, by type, 1797-1957.
Source: See source for series Q 153-168.
The source publication also presents statistics separately for steam, motor, and sailing vessels, canalboats, and barges. Statistics for motor vessels begin in 1898.

For 1938-1957, figures are not comparable with those for earlier years and are probably understated. They represent those vessels built during the 12 -month period which were still existent and documented as part of the merchant fleet at the end of the period. Hence, they exclude vessels completed during the period which were lost, sold to U.S. Government, sold to aliens, or otherwise removed from merchant vessel documentation before the end of the period.

See also general notes for series Q 153-245 and Q 153-190.
Q 183-187. Merchant vessels built and documented, by region, 1817-1936.
Source: Bureau of Marine Inspection and Navigation, Merchant Marine Statistics, 1986, pp. 46-48, and table 2.
See general notes for series $Q 153-245$ and $Q 153-190$.
Q 188-190. Merchant vessels built and documented, by region, 1817-1850.
Source: Fold-in table on the history of shipbuilding (18171868) at back of the Annual Report of the Secretary of the Treasury, 1868.

Source also presents figures separately, for "The United States," "The Lakes," and "Western Rivers." For a discussion of these data see the Annual Report. The source table, with a more detailed discussion appears as Plate XXII in H. R., Ex. Doc. No. 111, 41st Congress, 2d Session, where the period covered is extended to 1869, and as Plate $X$ (extended to 1870) in H.R. Ex. Doc. No. 76, 41st Congress, 3d Session. These three series do not add to series Q 179.
See also general notes for series $Q$ 153-245 and Q 153-190.
Q 191. Persons entering the United States by ship, 1933-1957.
Source: Treasury Department, Annual Report of the Secretary of the Treasury on the State of the Finances, various issues.

Data include persons entering by documented vessels, excluding ferryboats.
Q 192-203. General note.
Net tonnage capacity, as used here, refers to net or registered tonnage of the vessel, not weight of cargo. The net tonnage is what remains after deducting from the gross tonnage (defined in general note for series $Q$ 153-190) the spaces occupied by the propelling machinery, fuel, crew quarters, master's cabin, and navigation spaces. It represents, substantially, space available for cargo and passengers. It is the usual basis for tonnage taxes and port charges. The net tonnage capacity of a ship recorded as "entered with cargo" may bear little relation to actual weight of cargo. Gross tonnage and net tonnage are both measures of cubic capacity, not of weight, 100 cubic feet equalling 1 ton. These terms should not be confused with the cargo ton of 2,000 pounds. Tonnage figures shown in series Q 193 and Q 199 for U.S. vessels entered and cleared, respectively, in foreign trade are greater than the total tonnage of U.S. vessels documented for the foreign trade because the "entered" and "cleared" series include tonnage for each vessel as often as it "enters" or "clears"
each year. The documented tonnage (series Q 154) includes the tonnage of each vessel once for each year.

These figures include the tonnage of all types of watercraft engaged in the foreign trade, whether entering or clearing with cargo or in ballast, which are required to make formal entrance and clearance under U.S. customs regulations. Vessels engaged in trade on the Great Lakes with Canada as well as in trade with Mexico are also included. Vessels touching at a U. S. port in distress or for other temporary causes without discharging cargo, and Army and Navy vessels carrying no commercial cargo, are not required by customs regulations to enter or clear and thus are not included in the figures.
Vessels are reported as entered at the first port in the United States at which entry is made, regardless of whether any cargo is unladen at that port; arrivals at subsequent ports are not counted. Vessels are reported as cleared from the last port in the United States where loading of outward cargo is completed or where the vessel cleared in ballast; departures from prior ports are not counted.
Q 192-194. Vessels entered, all ports, 1789-1957.
Source: 1789-1820, Fred J. Guetter and Albert E. McKinley, Statistical Tables Relating to the Economic Growth of the United States, McKinley Publishing Co., Philadelphia, 1924, p. 39; 1821-1879, Bureau of Marine Inspection and Navigation, Merchant Marine Statistics, 1986, p. 93; 1880-1888, Statistical Abstract of the United States, 1908, p. 286; 1889-1916, Statistical Abstract, 1916, p. 338; 1917-1930, Statistical Abstract, 1981, p. 474; 1931-1944, Statistical Abstract, 1947, p. 558 (see general note for series Q 153-245 for the various agencies which have issued the Statistical Abstract); 19451946, Foreign Commerce and Navigation of the United States, 1947; 1947-1957, Bureau of the Census, Vessel Entrances and Clearances, Summary Report FT 975, various issues, and records.
Q 195. Total vessels entered at seaports, 1840-1957.
Source: 1840, Statistical Abstract of the United States, 1946, p. 546; 1844-1855, Statistical Abstract, 1878, p. 134; 18561879, Statistical Abstract, 1880, p. 138; 1880-1957, see source for series Q 192-194.
Q 196-197. U.S. and foreign vessels entered at seaports, 1856-1957.
Source: 1856-1879, see source for series Q 195; 1880-1957, see source for series Q 192-194.
Q 198-200. Vessels cleared, all ports, 1821-1957.
Source: See sources cited for specific periods (except 17891820) for series $Q$ 192-194; the following page numbers apply respectively to the sources cited: $93,287,475,558$, and 592.
Q 201. Total vessels cleared at seaports, 1840-1957.
Source: 1840 and 1850, Statistical Abstract of the United States, 1946, p. 546; 1853-1879, Statistical Abstract, 1881, p. 138; 1880-1957, see source for series Q 192-194.
Q 202-203. U.S. and foreign vessels cleared at seaports, 1857-1957.
Source: 1857-1879, Statistical Abstract of the United States, 1881, p. 136; 1880-1957, see source for series Q 192-194.
Q 204-209. Value of waterborne imports and exports (including reexports) of merchandise, $1790-1946$.
Source: 1790-1820, see source for series $Q$ 192-194; 18211858, Bureau of Marine Inspection and Navigation, Merchant Marine Statistics, 19s6, p. 91; 1859-1866, Statistical Abstract of the United States, 1895, pp. 399-400; 1867-1912, Statistical Abstract, 1918, pp. 818-319; 1918-1923, Statistical Abstract,

1924, p. 417; 1924-1935, Statistical Abstract, 1946, p. 552 (see general note for series $Q$ 153-245 for the various agencies which have issued the Statistical Abstract) ; 1943-1946, Bureau of the Census, Foreign Commerce and Navigation of the United States, annual issues.

The primary source of figures for $1790-1820$ is J. R. Soley, "The Maritime Industries of America," The United States of America (N. S. Shaler, Editor), vol. II, 1894, pp. 522-527, 534, 536, 538. The report gives the percent of imports and exports in U.S. vessels. Guetter and McKinley (cited above for series $Q$ 192-194) have derived absolute figures by applying these percentages to total imports and exports of merchandise and specie. The primary source of figures for 18211935 is Foreign Commerce and Navigation of the United States, annual issues. Starting with 1943, import or export statistics by method of transportation showing shipping weight, as well as dollar value, have been compiled by the Bureau of the Census.

Q 210-215. Waterborne imports and exports, by flag of carrier vessel, 1921-1957.
Source: 1921-1945, Bureau of the Census, Foreign Commerce and Navigation of the United States, annual issues; 1946-1957, Bureau of the Census, releases and records.

Excludes cargoes (small in the aggregate) carried by ships of less than 100 tons gross capacity prior to 1946. Beginning in 1946 excludes Army and Navy cargo, and includes Alaska, Hawaii, and Puerto Rico. Beginning in July 1950 excludes commodities classified for security reasons as "special category." From July 1953 to December 1955 and beginning July 1956, exports exclude shipments under $\$ 500$ in value regardless of shipping weight; for January-June 1956, exports exclude shipments under $\$ 1,000$. Beginning 1954, imports exclude shipments under 2,000 pounds shipping weight.
Q 216-229. Waterborne cargo tonnage, foreign and domestic, 1924-1957.
Source: 1924-1953, Corps of Engineers, Annual Report of the Chief of Engineers, part 2; 1954-1957, Annual Report of the Chief of Engineers, U.S. Army, on Civil Works Activities, part 1.
In 1954, part 2 of the Annual Report was superseded by a separate publication entitled Waterborne Commerce of the United States (published in several regional parts). Part 5 of this report, National Summaries, presents separate figures for series Q 221-222 for "Canadian" and "overseas" for recent years.

Cargo tonnage refers to the weight of cargo and should not be confused with gross tonnage shown in series Q 153-190 or the net or registered tonnage capacity shown in series $Q 192$ 203, which are measures of cubic capacity, not of weight. See also text for those series.
Q 230-234. Waterborne bulk freight traffic on the Great Lakes, 1900-1956.
Source: Lake Carriers' Association, Annual Report, 1956, pp. 62-63.

Includes tonnage moving to or from Canadian or U.S. lake ports, in Canadian or U.S. bulk carriers.
Q 235-237. Commercial ocean traffic on the Panama Canal, 1915-1957.
Source: 1915-1924, Governor of the Panama Canal, Annual Report, 1948, p. 10; 1925-1957, Panama Canal Company, Annual Report, various issues.

Does not include U.S. Government traffic.

Q 238-242. Freight traffic on the Sault Ste. Marie canals, 1855-1900.

Source: Corps of Engineers, Statistical Report of Lake Commerce Passing Through Canals at Sault Ste. Marie, 1931.

These series include traffic moving through the American and Canadian canals. Figures for later years may be obtained from various issues of Corps of Engineers, Annual Report, part 2, Commercial Statistics. They are not shown here because they pertain only to traffic between Lake Superior and the other lakes and series Q 230-234 therefore provide more comprehensive totals of Great Lakes traffic.

Q 243-244. Tonnage moved on New York State canals, 18371957.

Source: State of New York, Department of Public Works, Annual Report of the Superintendent, annual issues, and records.

Q 245. Federal expenditures for rivers and harbors, 1822-1957.
Source: 1822-1882, Statement of Appropriations and Exponditures for Public Buildings, Rivers and Harbors, Forts, Arsenals, Armories, and Other Public Works from March 4, 1789 to June so, 1882, U. S. Senate Ex. Doc., vol. 7, No. 196, 47th Congress, 1st Session (Treasury Department Doc. No. 873), pp. 521-522; 1883-1919, Federal Works Agency, records (compiled from Treasury Department accounts); 1920-1957, Corps of Engineers, Annual Report of the Chief of Engineers, U.S. Army, part 1, vol. 1, annual issues (in 1954, changed to Annual Report of the Chief of Engineers, U.S. Army, on Civil Works Activities, part 1).

Figures include expenditures for rivers, harbors, and flood control prior to 1928. In 1928, expenditures for flood control amounted to less than $\$ 13,500,000$. Figures for 1929-1957 exclude expenditures for flood control. The figures include amounts expended from emergency relief and Public Works Administration funds, 1933-1937, but exclude $\$ 5,500,000$ for purchase of Cape Cod Canal, 1928, expended by and accounted for by Treasury Department.

Series Q 153-168. Documented Merchant Vessels, by Major Classes, Material of Which Built, and Trade: 1789 to 1957
 1848-1940; January 1 thereafter]

## HIGHWAY TRANSPORTATION (Series Q 246-344)

## Q 246-264. General note.

In 1894, the Federal Government created an Office of Road Inquiry to initiate experiments and conduct inquiries concerning the best methods of road building. It was succeeded by the Office of Public Roads, which is now the Bureau of Public Roads (the latter was called the Public Roads Administration during 1939-1949). The Office of Public Roads made surveys of highway mileage, revenues, and expenditures in 1904, 1909, and 1914.

In 1916, Congress passed the first of the many Federal-aid highway acts, under which the Federal Government has contributed to the cost of constructing highways designated as parts of the Federal-aid system. The Bureau of Public Roads administers Federal legislation providing for the improvement, in cooperation with the States, of roads on the Federal-aid primary, secondary, and interstate highway systems. As the principal road-building agency of the Federal Government, it also cooperates with the Forest Service, the National Park Service, and other Federal agencies in the construction of roads in national forests, parks, and other areas.
Q 246-251. Mileage of rural roads and municipal streets, 1904-1957.
Source: 1904-1955, Bureau of Public Roads, Highway Statistics, Summary to 1955, 1957; 1956-1957, Highway Statistics, annual issues.

Rural roads, as used here, are defined roughly as those roads located outside of incorporated communities or delimited places generally having more than 1,000 inhabitants. Estimates for earlier years for total mileage of rural roads are (in thousands of miles ) : 1904, 2,151; 1909, 2,200; 1914, 2,446.
Municipal and other mileage figures for 1934 and 1935 represent only mileage on municipal extensions of State systems, which are State administered. Mileage not on State or county systems was initially included in 1936 ( 67,000 miles). Mileage on local city streets was first included in 1341 (274,000 miles for that year). Municipal extensions are continuations of State system roads through communities with more than 1,000 inhabitants. Although mileage in places having more than 2,500 inhabitants was not originally included in Federalaid programs, those places have been eligible for such aid in more recent years.
Q 252-254. Existing surfaced mileage, 1904-1957.
Source: See source for series Q 246-251.
High-type surfaced roads include bituminous penetration, sheet asphalt, bituminous concrete, portland cement concrete, vitrified brick, and block pavements of asphalt, wood, and stone. For some years, they also include dual-type surfaces and a small amount of unclassified mileage. Low-type surfaced roads include sand, clay, selected soil, untreated gravel, bituminous surface-treated, mixed bituminous and treated gravel, chert, shale, waterbound macadam.
Q 255-259. Mileage built by State highway departments, 1928-1957.
Source: See source for series Q 246-251.
Mileage built is mileage on which construction work creates a newly located road or is regarded as significantly improving the condition of an existing road. It does not include work designed to maintain or restore the condition of an existing road without material betterment. Mileage resurfaced or
rebuilt to higher standards is the bulk of mileage built. Construction of earth roads consists of aligning, grading, and draining. See also text for series Q 252-254.
Q 260-264. Mileage and cost of Federal-aid highway improvements, 1917-1957.
Source: See source for series Q 246-251.
In 1912, the Congress authorized $\$ 500,000$ for an experimental program of rural post-road construction. However, it was not until the Federal-Aid Road Act of 1916 that the present cooperative Federal-State highway program was established on a continuing basis. In order to accelerate the improvement of the main traveled roads, Congress in 1921 authorized designation of a system of principal interstate and intercounty roads, limited to 7 percent of the total rural mileage then existing. The use of Federal aid was restricted to this system, and to rural mileage only.

Urban highway improvement first came in for its share of the Federal-State program when the Federal-Aid Highway Act of 1944 specifically authorized the use of funds for Federal-aid highways in urban areas. In addition, the Act provided for the designation of a Federal-aid secondary system and a National System of Interstate Highways. The Federal-Aid Highway Act of 1956 provided substantially increased sums for the Federal-aid primary and secondary systems for a 8 -year period, and established a long-range plan for financing accelerated completion of the 41,000 -mile interstate system.

Federal funds are available for expenditure only on the designated Federal-aid systems and, in general, must be matched by an equal amount of State funds. However, under the Federal-aid Act of 1954 the Federal share for the Interstate System was raised to 60 percent, and under the 1956 Act the proportion was increased to 90 percent. Federal aid may not be expended for maintenance. The cost of most Federal-aid projects is paid initially out of State highway funds, or in some cases by counties or other local governments. The Federal share is paid as reimbursement to the States as work progresses, with final payment made after completion.

Federal authorizations have usually been made on a biennial basis and apportioned among the States for use within a 3year period. Figures for State funds shown here are based on legal matching ratios determined by applicable Federal-aid acts. In States having public lands in excess of 5 percent of their total area, the Federal share is proportionally increased.
Q 265-279. State highway finances, 1890-1957.
Source: See source for series Q 246-251.
A State highway-user tax is defined as a special tax or fee (except tolls) levied upon motor-vehicle users because of their use of the highways. Highway-user taxes include motor-fuel taxes, motor-vehicle registration and associated fees, and spocial taxes applicable only to motor carriers; these taxes are separable and apart from property, excise, business, or other taxes paid by the general public.

In many States, specific portions of the revenue from each type of highway-user tax are allocated to particular highway purposes. A number of States, however, place all highwayuser revenue in highway fund, and a few have a general State fund into which go all types of revenue. For the lattor group of States, each particular appropriation or expenditure for highway purposes is considered to have been made from
motor-fuel taxes, motor-vehicle registration fees and motorcarrier taxes in proportion to the relative amount of revenue received from each of these three sources.
The largest share of receipts from State highway-user taxes is expended on State highways, but a portion is also allocated for local roads and streets, and a small amount used for nonhighway purposes.
Q 280-293. Funds contributed and disbursed for county and other local rural roads, 1921-1956.
Source: 1921-1955, the principal sources used were Bureau of Public Roads, Highway Statistics, Summary to 1955; The Financing of Highways by Counties and Local Rural Governments, 1951-1941; The Financing of Highways by Counties and Local Rural Governments, 1942-51; 1956, in great part from Highway Finance, 1948-1957. (Additional information obtained from Bureau of Public Roads, annual published local finance tables, 1921-1955, and records on file at the Bureau of Public Roads.)
Q 294-809. Funds contributed and disbursed for atreets in incorporated and other urban places, 1921-1956.
Source: 1921-1955 (except for series Q 303, 1924-1939), Bureau of Public Roads, Highway Statistics, Summary to 1955; and annual published national summaries of urban finance data, UF series. Series Q 303, 1924-1939, "Municipal Bond Sales," published by The Bond Buyer; 1956, in great part from Highway Finance, 1948-1957. (Additional information is on file at the Bureau of Public Roads.)
Q 310-313. Motor-vehicle factory sales, 1900-1957.
Source: Automobile Manufacturers Association, Automobile Facts and Figures, 38th edition, 1958.

Production of passenger cars was discontinued in February 1942 to economize resources for war purposes, but some vehicles remaining in factory stocks were sold under rationing orders in subsequent war years.
Q 314-817. Motor-vehicle registrations, 1900-1957.
Source: 1900-1952, Bureau of Public Roads, Highway Statistics, Summary to 1955; 1953-1957, same agency, records (table MV-200, "Summary of Motor Vehicle Registrations by Years").

Figures are based on reports and records of State motorvehicle registration departments. They include both privately and publicly owned vehicles.

Motor-vehicle data in the early years of the century are incomplete, largely because few States required their registration, and hence had no records of the number of vehicles using roads and streets. As production of vehicles increased, shortly before the first World War, so did the number of registration laws. By 1921, all States had adopted some form of motorvehicle registration.
Accompanying the growth in motor-vehicle registrations has been a corresponding diversity in the registration practices among the States. In general, motor vehicles are classified as private passenger cars, passenger carriers for hire, trucks, trailers, motorcycles, and property carriers for hire. Several States, however, still register buses with either trucks or passenger cars. These differences have made it necessary for the Bureau of Public Roads to supplement the data submitted by the States with information obtained from special studies and from other sources.
Q 818-820. Motor-fuel usage, 1919-1957.
Source: 1919-1955, Burean of Public Roads, Highway Statistice, Summary to 1955, p. 2; 1956-1957, same agency, records (table G 221, Analyuis of Motor Fuel Consumption).

Fuel consumption figures for which reports from State authorities were not available have been estimated by Bureau of Public Roads. Motor fuel includes all gasoline used for any purpose (private and public), except military, plus any diesel or other fuels used solely for the propulsion of motor vehicles on public highways. Exports from the United States are excluded, and there is no duplication because of interstate shipment. Tractor fuels are not included. Nonhighway consumption includes all use off the highway, such as aviation, agriculture, marine, industrial, etc., and usually falls under the exemption or refund provisions of the motor-fuel tax law.
Q 321-327. Miles of travel by motor vehicles, 1921-1957.
Source: 1921-1935, Federal Works Agency, records, and Public Roads Administration, records (table VM-1 and table entitled "Estimates of Vehicle-Miles Traveled, 1921 to 1947"); 1986-1957, see source for series Q 246-251.

Q 328-329. State and Federal gasoline tax rates, 1930-1956. Source: See source for series Q 246-251.
State average tax is weighted by net gallons taxed at the various rates in the several States. No data are shown before 1930 because it was the first year in which all States had motor fuel taxes in effect for the whole year.
The precise dates of the changes in the Federal tax are as follows: June 21, 1932, 1 cent; June 17, 1933, 1.5 cents; January 1, 1984, 1 cent; July 1, 1940, 1.5 cents; November 1, 1951, 2 cents; July 1, 1956, 3 cents.
Q 330-341. Public transit mileage, equipment, passengers, and passenger revenue, 1917-1957.
Source: American Transit Association, Transit Fact Book, various annual issues; The Transit Industry in the United States, Basic Data and Trends, 1943; mimeographed release on number of passengers, dated January 3, 1938.
Figures are estimates based on reports for about 85 percent of the industry, which includes local motorbuses, electric street railways, elevated and subway lines, interurban electric railways, and transit coach lines.

Mileage estimates for trolley coaches (series Q 331) are miles of negative overhead wire. Mileage estimates for motorbuses (series Q 332) are miles of route, round trip. Equipment owned, railway cars (series $Q$ 383) includes surface, subway and elevated cars. The estimates for 1933 and 1984 for equipment owned, motorbuses (series $Q$ 835) are probably understated. Revenue and nonrevenue passenger figures (series $Q$ 386-339) exceed revenue passenger figures (series $Q$ 840) chiefiy because of free transfers.

Q 342-344. Oil pipelines operated and oil originated, 19211957.

Source: 1921-1958, Interstate Commerce Commission, Statistics of Railways in the United States, various annual issues; 1954-1957, Transport Statistics in the United States, part 6, Oil Pipe Lines.

Figures refer to pipelines operating in interstate commerce and regulated by ICC. Oil originated, crude, series Q 348, includes both gathering and trunk lines.

For a discussion of statistics of oil pipelines, see ICC, A Review of Statistics of Oil Pipe Lines, 1981-1941, Statement 4280, mimeographed, 1942. The figure for mileage in 1988, which appears to have been revised, is from this Statement.

Figures for barrels of oil carried are as follows, in millions: 1925, 831; 1926, 886; 1927, 989; 1928, 1,053; 1929, 1,156; 1930, 1,172; 1931, 987. In these figures, a barrel handled by two or more pipelines in succession is counted each time it is handled. In the figures for barrels originated, this duplication is avoided.

## AIR TRANSPORTATION (Series Q 345-397)

Q 845-397. General note.
Only scattered data on air transportation are available for years before 1926. Regular collection of national statistics began with the establishment in that year of an Aeronautics Branch in the Department of Commerce. In 1934 a Bureau of Air Commerce was organized in that department. The Civil Aeronautics Act of 1938 created the Civil Aeronautics Authority, an independent regulatory agency, which was reorganized in 1940 into 2 separate entities, the Civil Aeronautics Board and the Civil Aeronautics Administration. The latter's annual Statistical Handbook of Civil Aviation is the source for the statistics presented here.

Statistics of domestic scheduled airline operations cover trunk airlines, local service airlines, helicopter carriers, and territorial airlines except those operating in Alaska. Scheduled intrastate airlines are not included anywhere, nor are those operating locally in Alaska. Statistics of international scheduled airline operations include not only operations to and from foreign countries but overseas operations to American possessions. They also include the service of Northwest Airlines and Pan American World Airways between the United States and Alaska. Some companies operate in both the domestic and the international fields, but the statistics are segregated.
Operations of scheduled carriers of cargo only are generally not included.
Q 345-351. Aircraft production and exports, 1913-1957.
Source: Civil Aeronautics Administration, Statistical Handbook of Civil Aviation, 1958 edition. (A few of the earlier figures are from the 1945 or 1948 edition.)
Q 352-362. Scheduled air transportation, domestic and international, 1926-1957.
Source: See source for series Q 345-351.
Q 863-375. Scheduled airline revenues and expenses, 19881957.

Source: See source for series Q 345-351.
Q 376-383. Airports, aircraft, pilots, and miles flown, 19261957.

Source: See source for series Q 345-351.
Figures for airports and landing fields (series Q 876-877) include civil, military, and CAA fields but exclude seaplane
facilities prior to 1953. Growth of airports after 1940 was stimulated by Federal defense expenditures during the war and by the Federal-aid airport program thereafter.

Estimates of the number of certificated pilots (series Q 379382) refer to persons certificated by CAA in the various classifications. Some may not have been actively engaged in the classification for which they were certificated. The count of certificated pilots after 1941 is not directly comparable with the previous years as the Civil Aeronautics Regulations were amended to permit pilot certificates currently effective on April 1, 1942, to continue in effect indefinitely. This amendment expired on July 1, 1947. The number of commercial pilots (series Q 381) rises sharply after 1944 because the CAA awarded many veterans commercial certificates on the basis of their military flying experience. The number of private pilots (series Q 382) increased sharply after 1939 because of the Federally subsidized civilian pilot training program which was initiated in 1939. It gave preliminary training to hundreds of thousands of men who went into the military service. Miles flown (series Q 383) include business flying (by corporate executives or employees or by individuals, including farmers, on personal business), commercial flying (contract, charter, crop-dusting, photographic, etc.), instructional flying, pleasure flying, and other flying (testing, experimental, ferrying, Civil Air Patrol, etc.). Separate data on these five categories are given in the source.

Q 384-397. Air transportation accidents, 1927-1957.
Source: See source for series Q 345-351.
An aircraft accident is considered to be any occurrence, while the aircraft is operating as such, which results in fatal or serious injury to persons or appreciable damage to the aircraft. The aircraft is considered to be "operating as such" from the time the engine is started for purposes of flight until the flight is completed; in the case of gliders, while they are under tow or gliding.

Propeller accidents to persons are included. A collision between two or more aircraft is counted as one accident.

Data include military contract operations for 1956 and 1957, but not for earlier years. Scheduled cargo carriers are included for 1949-1957, but not for earlier years.

${ }^{1}$ Identified as "Shipments of complete civilian aircraft" for 1948-1957 in Civil Aeronautics Administration, Statistical Handbook of Civil Aviation, 1958 edition.
${ }_{2}$ Value of aircraft, engines, parts, parachutes, etc.
${ }^{3} 1913-1918$, fiscal years, 1919-1957, calendar years. Data for the second half of 1918 are included with calendar year 1919.
${ }_{5}$ Exclusive of gliders and barrage balloons. 1949-1957, civil aircraft only. and aircraft parts. Prior to 1922, engine values were not reported separately but were probably included with either "other" internal combustion engines or with "parts" of aircraft. Values for parachutes and their parts have been included only since 1932.

6 Data not available for security reasons.
${ }^{7}$ Not available.
${ }^{8}$ Includes U.S.-financed aircraft manufactured in Canada.

- Includes military aircraft for Lend-Lease shipmente

10 Values are for military aircraft produced in the United States only. These data 10 Values are for military aircraft produced in the United States only. These data
were computed by the War Production Board in terms of August 1943 unit coss. The were computed by the War Production Board in terms of August 1943 unit cost. The
values are not meant to measure output at current prices or expenditures. The 1940 figure is only for the second half of that year; the 1945 figure covers only the first 8 months.
${ }^{11}$ No production other than military.

Series Q 352-362. Scheduled Air Transportation, Domestic and International: 1926 to 1957
[As of December 81 or for year ending December 81. All data refect echeduled operations exchualvely]

[^8][^9]Series Q 363-375. Scheduled Airline Revenues and Expenses: 1938 to 1957
[In thomennde of dollars. Figures in italice denote lom]

${ }^{1}$ Includes maintenance formerty reported as ground and indirect expence.
Inciudes mainteance formeriy reported as ground and indirect expence.
of expeese wat not aperating expeneen for Colonial, for which distribution by type
onale.
